

## Project Third Submission

For the purpose of your third and last submission for the course project please submit the following:

1) The zipped version of your Android Studio project that contains your completed work. You need to use Windows zip facility (or Mac) to submit your work (I ignore submissions in any other format such as .rar).

I should be able to download your zipped folder on my machine, unzip it and browse to its location and open it using Android Studio on my machine. Please mention the version of Android Studio that was used to develop the app in your document file.

I need to run the project to evaluate your work and compare it with your previous submission. So please make sure you include any information I need in testing your app in your document file.

If your app provides sign in capability, make sure you include a test account with its related credentials so your app can be tested.

2) A user guide in Word and PDF format that allows someone who wants to use your app become familiar with all the features it has to offer and helps the user to quickly learn about the app.

You can also include a video that guides someone on how to use the app but that's optional. The Word and PDF guides are required, and they should use screen captures and contain easy to understand instructions on how the app can be used and what features it offers.

Avoid including technical stuff here since this is for the user and not a developer.

3) A Microsoft Word document (or PDF) that has your name and student ID at the beginning followed by the title of your project.

After the title, please mention all the technologies used in developing your app and any APIs used followed by the credentials for a test account if needed so I can test your app.

Due to the number of projects, registering and creating my own account to test your work is not an option.

I will use the test account and the credentials you provide, to examine your app so please make sure they work.

Please keep in mind that in order to give you credit for your work, I need to test the app, so please include anything you believe I need to test your app.

It is necessary to mention the version of Android Studio used to develop the app and the names of the emulators and devices and APIs used in testing the app at this point.

For the rest of the document, please mention any features which have been completed or developed since your second submission.

Your work will be evaluated based on your original proposal, and your second submission so if there are substantial changes since your second submission, please provide me with the reason.

By substantial changes I mean the technologies used otherwise your original idea which was approved can not be changed.

If applicable, please include screen captures of the implemented features to make it easier for me to determine how much work has been done since your second submission.

The project had to be done over the course of the semester, and it is important for your final grade on it that you are as detailed and clear as possible on what has been done since your second submission, and how it is related to your project proposal.

The submission needs to be made before the due date. Late submissions or submissions with missing files won't receive any credit. Please note that you have one submission only, if you don't submit a file in your first submission, you won't get another chance to do so.

Submitting a missing file over the email is not acceptable so please make sure you are satisfied with your submission (have uploaded the correct zip file and have included the document file and the user guide) before clicking the submit button and make sure you are submitting your work before the due date.
